

What's New

In Kernel Exchange Suite

This document illustrates the latest updates to Kernel Exchange Suite 20.7.

Introduction

Kernel Exchange Suite is an exclusive platform where users can perform advanced Exchange Server recovery, migration, and exports quite easily.

It supports migration between all Exchange Server versions and includes smart filter options for selective content migration.

The latest updates to Kernel Exchange Suite ensures quicker migrations between Exchange Server versions. It includes a new split PST feature to split large PST files while exporting any Exchange mailbox to a new PST file. It also generates a detailed log file for the same.

Latest Enhancements

Kernel Exchange Suite, Version 20.7, has the following updates.

- Smoother and quicker migration processes
- Facility to split PST file while moving single Exchange mailbox messages to a new PST file (earlier this feature was only for multiple mailboxes)
- Log report generation for single mailbox export to PST file also.

The newly added updates to Kernel Exchange Suite version 20.7 enhances the tool in terms of smooth functioning and beneficial features.
