

WHAT'S NEW

V19.7

Kernel Merge PST

# Introduction

Kernel Merge PST ver 19.7 is designed to merge the desired number of Outlook PST files into a single PST file. It contains two processes, Merge - to merge the multiple PSTs into single PST and Join - to save multiple files into single PST but with separate folders. It allows to migrate specific folders from each PST file and also to filter data on the basis of date range, item type criteria.

Now, the users can save the merged or joined PST files to an existing PST file or to a new PST file.

The updated version, Kernel Merge PST version 19.7, introduces new features adding more flexibility and improving the speed.

## Updates

- .....> Provision to merge desired number of PST files to the existing Outlook PST file
- .....> Offers to move the joined multiple PST files to a large, already existing PST file
- .....> Enhancement in performance with the introduction of powerful algorithms

This recent version offers enhanced performance and more accuracy.
